

Diana Bradbury Joins Advanced Quality Systems as Vice President Sales and Business Development to Drive AQS Adoption in US Market.

Advanced Quality Systems
November 12, 2020

Vancouver, Canada, Nov 10, 2020 --- Advanced Quality Systems announced today that Diana Bradbury, a veteran healthcare technology sales executive, has joined as The Vice President of Sales and Business Development and will be responsible for driving commercial sales and expansion into the US of AQS products and services.

Diana joins the AQS team as the VP of Sales & Business Development bringing with her fifteen years of Healthcare IT sales and service experience with McKesson and Change Healthcare. Her proven track record in fostering positive customer partnerships earned her the opportunity to provide strategic account services to Tenet Healthcare, one of the largest IDN's in North America.

"I have extensive experience in deep dive hospital operations, including business analytics, contract development, clinical education and medical imaging technology" said Diana Bradbury. "I am impressed with the AQS portfolio to redefine and re-imagine the quality control of medical devices."

"Diana's work philosophy is one that is grounded in collaboration. She is passionate about leveraging her skills to effectively reach shared goals set by her customers and prides herself on fostering long lasting professional relationships" said Miran Aziz, COO of Advanced Quality Systems. "I welcome Diana and I am excited to have her join the team to help drive our sales growth and increase the AQS footprint in the market."

Bradbury's addition to the team comes at a time where the company continues to leverage the success in the Canadian market and shifts its focus to expansion in the US. Bradbury joins the AQS team as one of a recent growth in executive leadership, strengthening the company's path towards execution of its US based expansion goals.

About

AQS ILLUMINA drives improved standardized TJC and ACR quality compliance and reduces overall management overhead for QC operations, aids physicists, while reducing costs and enabling Radiology staff to spend more time filming and providing increased value added care.

The system uses sophisticated pattern recognition algorithms and image analysis to quickly analyze the images and calculate all the required values for Vendor, ACR and TJC compliant tests.

Advanced Quality Systems team includes Richard Moss, Miran Aziz, Diana Bradbury, Richard Tom and Lou Ann Hinton, former senior executives with decades of health care IT experience between them in the areas of product and business development, sales, operations in both large organizations and start-up businesses.
